

Thanks for joining us.

A quick recap of the evening: Nick Foley on what video games teach us about human connection in an AI world, and a live Q&A between Longcloud's Paul Singh and Trent Montgomery, Managing Director of TDM Transport, on the digital platform we built together.

1 The Talk

KEYNOTE

Human Connection in an AI World

Nick Foley · Longcloud

Drawing on decades of video games as social spaces, Nick explores how the technology that seems to isolate us has, again and again, brought people together — and what that means for building AI that deepens human connection rather than replacing it. Scan the code to open the full presentation on your phone or laptop.

2 The Q&A — TDM Transport

PAUL SINGH × TRENT MONTGOMERY

A digital transformation platform for a Waikato logistics leader

Transport & Logistics

Waikato, New Zealand

Office portal + driver app

Real-time · one database

tdmtransport.co.nz

TDM Transport had grown into a leading Waikato freight and heavy-haulage operator. Rather than wait for the pains of scale to bite, Managing Director Trent Montgomery brought in Longcloud to build a single platform connecting people, vehicles, customers and data in real time — a foundation for the next phase of growth.

THE CHALLENGE

- **No single view** — fleet, jobs, customers and staff lived in separate places.
- **Live visibility** — fleet and job status had to be pulled together, not seen live.
- **Driver-to-office** — coordination relied on ad-hoc calls and messages.
- **Compliance** — vehicle compliance and maintenance needed a structured process as the fleet grew.
- **Reporting** — performance insight was assembled by hand, not on demand.

WHAT WE BUILT

- **Office portal** — real-time dispatch calendar plus jobs, CRM, HRIS, fleet, maintenance, fuel & reporting. Microsoft 365 single sign-on, locked to the company domain.
- **Driver app** — mobile-first; each driver sees only their jobs, submits photo proof of pickup & delivery, and chats live with the office, all tied to the job.
- **One real-time database** — an office assignment appears on the driver's phone, and a completed delivery back in the office, with no refresh or phone call.

▲ One live view

Fleet, drivers, customers and jobs connected in real time.

▲ Lower risk

Automated COF, rego & service tracking flags overdue items.

▲ Faster reporting

Revenue, pipeline & utilisation on demand; export to Excel.

▲ Built to scale

One integrated platform ready for TDM's ongoing growth.

Under the hood: Next.js 16 (React, App Router) · Supabase PostgreSQL & Storage · Vercel edge hosting. Real-time multi-user sync over WebSockets with optimistic UI; two purpose-built sign-in paths (Microsoft SSO for office, dedicated login for drivers); secure photo proof-of-delivery with a code-enforced "no photos, no completion" rule; and a graceful offline fallback for daily depot use. **What's next:** AI-assisted scheduling, route & utilisation optimisation, and predictive maintenance.
